

## LED DOWNLIGHTS

Energy efficient replacement lamps for Halogen + CFL

**PAR 38**

**MR16 6w**

**MR16 9w**

**GU 10**

Rotech LED downlights are suitable for 240v ac or 12vdc and fit into existing downlight gimble holders.

They operate at a much lower current and generate less heat than Halogen + CFL lamps.

When you consider that the average life is 5 -10 times longer than normal lights and the power consumption is 60% less, the cost savings over the life of the LED light are huge.

LED downlights come in a range of colours, but can only be used with specific types of dimmers. With an AC/DC battery back-up, you'll never be left in the dark when power fails.

### Applications:

- \* Hotels
- \* Showrooms
- \* Shops
- \* Showrooms
- \* Clubs
- \* Hospitals
- \* Residential
- \* Offices
