

Bulwark Removable Bollard

Anti Theft Screw

Can only be opened with a special tool.

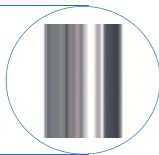

T Handle

Patented T shape handle rotates 360° to allow easy and safe removal of the bollard.

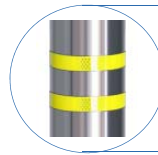

Cylinder

Your choice of 316, 304 stainless steel or mild steel powder coated to our standard colours (see below).

Reflective Tape

High quality 3M reflective tape ensures high visibility and is available in various colours.

Secure fixing

A special cylinder design ensures accurate positioning and prevents cylinder from rotating.

Base Cover

When the bollard is removed the base cover is locked in position to prevent accidents.

Bulwark removable bollards are a cost effective but flexible way to control access.

The removable bollard can be used in conjunction with matching fixed bollards to achieve a uniform appearance for modern commercial buildings, shopping centres and schools.

They are mainly used in an environment that requires access control with a low frequency of operation.

They are an ideal solution for restricting access to specific areas at certain times and are mainly used for staff parking, delivery bays and school drop off zones.
