

Reset

Resettable Call Point

The ReSet resettable call point is an EN54 Part 11 approved manual call point that mimics the feel of breaking glass whilst offering the user the benefits and environmental advantages of a resettable operating element. Several switching arrangements are available including a version for 2-wire systems.

Once installed, the ReSet need never be opened for test or reset. With no moving parts accessible to the engineer or user, the ReSet has proved to be highly reliable and robust.

Available as both internal or waterproof units, the ReSet features a clear indicator which drops into view at the top of the window on activation. The unit is then simply reset with a special key and is ready for immediate use.

Positive action - mimics the feel of breaking glass

A warning indicator drops into view when the call point is activated

To reset, a simple key is inserted into the bottom of the call point

A quick turn of the key and the call point is reset and immediately ready for re-use

Features

- * Glass appearance maintains deterrence
- * No need to open to reset - just use the key provided
- * Complete functional test with every activation
- * Two built-in resistor values minimises installation errors and ensures compatibility
- * Waterproof version available
- * Double pole changeover version available
- * Available in five colours - red, green, blue, yellow and white - for a diverse range of applications

Call Point Protection

The internal ReSet call point is available with a housing that incorporates an integral cover.

This complements both the STOPPER and Call Point STOPPER products, which provide call point protection - the covers help to stop malicious or accidental fire alarms.

With the integral cover and STOPPER options there are now three levels of protection available, appropriate for any environment.
