

RIM DOWNLIGHT

Energy Saving LED

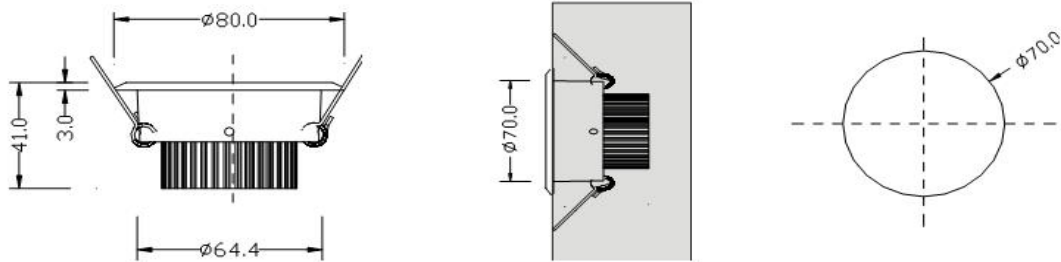

The RIM down light is a new generation green product with low energy consumption, long lifespan and low degradation.

The neat modern appearance combined with high quality LED's makes them a popular choice for homes, hotels and shops.

The RIM light is fitted with its own low voltage power supply and can be connected directly to the mains.

The RIM light is also suitable for use in confined spaces such as pay kiosks and behind shop counters as they generate only a fraction of the heat of an old style halogen light, with better light quality.
