

## LED TUBE LIGHTS

Energy efficient replacements for T8 + T5 fluorescent tubes

Rotech LED tube lights use up to 60% less power than standard fluorescent tubes, are mercury free and have a lifespan 5-10 times that of a normal fluorescent tube.

They are simple to fit and do not require replacement of existing fittings, only the starter has to be removed.

The LED tube is not affected by vibration and unlike conventional glass tubes the shock resistant PVC cover prevents breakages when installing.

Without any ballast or starter and the extended lifespan, the cost of maintenance is greatly reduced.

The low power consumption and lower operating temperature significantly reduce electricity costs.

### Applications:

- \* Hotels
- \* Showrooms
- \* Offices
- \* Schools
- \* Factories
- \* Hospitals
- \* Residential
- \* Child care centres
- \* Clubs
- \* Shopping centres
- \* Car Parks
- \* Restaurants
