

DIMMABLE DOWNLIGHTS

Ceiling Lights

Rotech dimmable ceiling lights are manufactured from a durable aluminium alloy housing and with a low profile that will fit into any ceiling.

They operate at a much lower current and generate less heat than Halogen + CFL lamps.

When you consider that the average life is 5 -10 times longer than normal lights and the power consumption is 60% less, the cost savings over the life of the LED light are huge.

LED downlights come in a range of colours, but can only be used with specific types of dimmers. Up to 50 lights can be operated from one dimmer.

With an RGB dimmable ceiling light and a DMX controller you can change the colours and create special effects for use in nightclubs, bars, theatres etc. With an AC/DC

battery back-up, you'll never be left in the dark when power fails.

Applications:

- * Hotels
- * Showrooms
- * Offices
- * Schools
- * Shops
- * Hospitals
- * Clubs
- * Restaurants
